Introduction to arXiv

Zivich Research Group

arXiv

What is it?

- A server that hosts preprints (versions of papers prior to publication) in physics, math, statistics, computer science
- There are other preprint servers (e.g., medRxiv) but this is the one I mostly use

Why use arXiv?

- Make preliminary research freely available and accessible
- Opportunity for wider feedback from peers or technical details for presentations
- 'Stake your claim' on a topic while going through peer-review

A quick overview of arXiv

arXiv is a free distribution service and an open-access archive for nearly 2.4 million scholarly articles in the fields of physics, mathematics, computer science, quantitative biology, quantitative finance, statistics, electrical engineering and systems science, and economics. Materials on this site are not peer-reviewed by arXiv.

Article Submissions Update Delete Unsubmit

Identifier	Type	Title	Status	Actions	Expires

START NEW SUBMISSION Submit a new paper using our refreshed v1.5 system. What changed?

Preflight Checklist for New Submissions

- If your submission is written in TeX you must upload your source. PDFs produced from TeX may be declined. Learn more about why TeX source is required
- Experienced authors recommend putting all the files you will upload into one folder before starting. Read how one author prepares a clean upload

Start >> Add Files >> Review Files >> Process >> Metadata >> Preview
Add Files
Prepare Files

Upload
Upload your files first then check them here

Submitting to arXiv

The first time you submit, you will need someone to *endorse* you

- This is to prevent spam from being posted

I may be able to endorse you, but I also have other contacts

In general, prefers use of `.tex` files, but can also upload a PDF of a Word doc

Identifier	Primary Category	Title	Actions	Author
2511.01960	stat.OT	Unifying Statistical and Mathematical Modeling Through a Causal Inference Lens		Y
2504.13291	stat.ME	Estimating equations for causal survival analysis with pooled logistic regression		Y
2503.02789	stat.AP	Accounting for Missing Data in Public Health Research Using a Synthesis of Statistical and Mathematical Models		Y
2510.07076	stat.ME	Confidence Regions for Multiple Outcomes, Effect Modifiers, and Other Multiple Comparisons		Y
2506.03347	stat.ME	Constructing g-computation estimators: two case studies in selection bias		Y
2306.10976	stat.ME	Empirical sandwich variance estimator for iterated conditional expectation g-computation		Y

Considerations

- Have you discussed with co-authors?
- Have you checked the preprint policies of the journals you may submit to?[1]
- Is arXiv the right fit? Or is there a better preprint server for your topic?

In general, I support the use of preprint servers. I think they are particularly valuable for receiving pre-publication feedback and offer a record of how a work changes through peer-review

[1] Most are fine, but some (e.g., *JAMA*) have historically had restrictions
